Education

GSFC University, Vadodara
B.Tech Computer Science and Engineering

2021 – 2025
CGPA – 7.08/10

Skills

- **Databases & Query Languages:** SQL Server (SSMS), Excel (Data handling)
- **Programming & Scripting Languages:** Python (NumPy, Pandas, Matplotlib, Seaborn) , R (Statistical Analysis), C (Fundamentals)
- **Data Visualization & BI Tools:** Power BI, Tableau
- **ETL & Data Integration Tools:** SSIS (SQL Server Integration Services), ETL Processes (Data Extraction, Transformation, Loading)
- **Data Modeling & Warehousing:** Data Modeling (Star Schema, Snowflake Schema, Fact/Dimension Tables), Database Design Principles
- **Cloud & Version Control:** Azure Cloud (Basics/Data Services), GitHub (Version Control, Collaboration)
- **Soft Skill:** Problem Solving, Adaptability, Team Collaboration

Internship

- ❖ **Data Engineering (Rishabh Software)** **(Jan 2025-June 2025)**
IPL Cricket Match Data Integration -Designed and implemented a robust ETL pipeline using SSIS to process ball-by-ball IPL match data. Developed a relational database schema to model complex cricket data including player stats, match events, and season details. Integrated data validation, transformation, error handling, incremental loading, and logging features. Delivered complete documentation and ensured adherence to best practices and naming conventions.
- ❖ **IBM Skill Build** **(June 24-Aug 24)**
Analyzed water quality data using Python (NumPy, Pandas, Matplotlib) with EDA and machine learning models like Decision Trees and Logistic Regression. Generated insights through visualizations to support Sustainable Development Goal 6 for clean and safe water access.

Projects

- ❖ **ETL Pipeline for CFPB Complaint Data – SSIS Project** **(May '25 – May '25)**
Developed an SSIS package to ETL consumer complaint data from CSV to SQL Server with data cleansing, validation, and error handling. Ensured data integrity and applied best practices, including dimension table creation for normalized reporting.
- ❖ **UK Built-up Areas ETL Pipeline – SSIS Project** **(May '25 – May '25)**
Built an SSIS package to import and transform UK area data from CSV to SQL Server with validation to prevent duplicates. Categorized areas by population range, exported results to CSV, and implemented error logging and population aggregation.
- ❖ **Business Sales & Customer Insights Dashboard using SSMS and Power BI** **(Jan '25 – May '25)**
Designed an interactive dashboard using SQL Server, Python, and Power BI to analyze sales trends and customer behavior. Automated data prep and integrated forecasting models for real-time, data-driven decision-making.
- ❖ **Sales Analysis Dashboard** **(March '25 – March '25)**
Created an interactive dashboard showing monthly sales trends, product performance, and regional analysis. Used Power BI features like slicers, DAX, and drill-down reports.
- ❖ **Financial Reporting Dashboard** **(March '25 – March '25)**
Developed a financial reporting dashboard to monitor revenue, expenses, and profit KPIs. Integrated data from Excel and SQL Server into Power BI for dynamic visualizations.

❖ **Pizza Report Dashboard**

(April '25 – April '25)

Developed an interactive Power BI dashboard with Home, Rating, and Summary pages to track revenue, orders, customer ratings, and pizza size distribution across selected time periods using Power Query and advanced visualizations.

Certificates

Python for Data Engineer or Data Analyst professional (BIT)	(20 th Jan 2025)
SQL(Basic)	(5 th June 2025)
SQL (Intermediate)	(6 th June 2025)
SQL (Advance)	(23 rd June 2025)
Data Visualization: Empowering Business with Effective Insights	(10 th Dec 2024)
